Andrew Tsay Jacobs is the Director of the Building Technology Lab at Perkins+Mill and a member of the International Code Council's Ad Hoc Committee on Tall Wood Buildings, which has been tasked with developing a proposal that may increase the height and code area limits on mass-timber buildings. Matt Timmers is a Project Manager at John A. Martin & Associates exploring mass timber high-rise design. His work delves into the cost and competitive advantages of wood construction over concrete.

Austin Baker is an Estimator at Hathaway Dinwiddie Construction Company. He is currently exploring mass timber buildings in Los Angeles and the construction feasibility and potential of mass timber systems. Together, Andrew, Matt and Austin will present on how mass timber provides a viable alternative to reinforced concrete construction in high seismic regions.
